

Programming a GM "Circle Plus" Key

- 1) Make sure your key has the "+" sign with a circle around it (see below):

- 2) Programming a GM "Circle Plus" transponder key will require one working key.
- 3) Insert the working key, turn to ON (accessory) for 5 seconds or until the car security light goes off (see below), then remove it.

- 4) Within 10 seconds, insert the new key, turning it to the ON position as before. The security light will turn off when programmed.
- 5) Your new key will now start the vehicle.
